

2.43 Advanced Thermodynamics

MIT - Spring2024 - Gian Paolo Beretta

References format: LL^vsSS = slide #SS of lecture #LL.

Hyperlinks: **s** takes you to the slide; **v** to the video.[‡]

[‡]To have your computer or smartphone open the target PDF files at the proper page, you may have to change the default settings. For example:

- In PC **Chrome**: Settings → Privacy and Security → Site Settings → PDF documents, and choose to open PDFs in Chrome.
- In PC **Firefox**: Preferences → General → Applications → Portable Document Format (PDF), and select “Open in Firefox”.
- In some Android smartphones, download the **Firefox** app, then: Settings → Applications → Firefox → “Set as Default”, and choose Firefox.

Abstracts of Lecture Contents

with **Hyperlinks** to **Slides** and **Video Timestamps**

Lecture 01: Definitions of System, Property, State, Weight Process; First Law and Energy	01 ^v s01
In 2024 Thermodynamics Turns 200 Years Old!	01 ^v s02
Some Pioneers of Thermodynamics	01 ^v s03
Reference Books by MIT-MechE Members of the “Keenan School”	01 ^v s04
Course Outline - Part I: Concise Review of Basic Concepts and Definitions	01 ^v s05
Course Outline - Part II: Chemical Potentials and Multicomponent Equilibria	01 ^v s06
Course Outline - Part III: Nonequilibrium States and Irreversible Processes in Continua	01 ^v s07
Course Outline - Grading Policy	01 ^v s08
Introduction to Part I: Concise Review of Basic Concepts and Definitions	01 ^v s09
The Loaded Meaning of the Word System	01 ^v s10
The Loaded Meaning of the Word Property	01 ^v s11
What Exactly Do We Mean by the Word State (of a System)	01 ^v s12
What Do We Mean by General Laws of Time Evolution	01 ^v s13
Time Evolution, Interactions, and the Concept of Process	01 ^v s14
Definition of Weight Process	01 ^v s15
Statement of the First Law of Thermodynamics	01 ^v s17
Main Consequence of the First Law: Definition of Property Energy	01 ^v s18
Consequences of the First Law: Additivity and Conservation of Energy	01 ^v s19
Consequences of the First Law: Exchangeability of Energy via Interactions	01 ^v s20
Consequences of the First Law: Energy Balance Equation	01 ^v s21
States Can Be Steady/Unsteady or Equilibrium/Nonequilibrium	01 ^v s23
Equilibrium States Can Be Unstable/Metastable/Stable	01 ^v s24
Hatsopoulos-Keenan Statement of the Second Law of Thermodynamics	01 ^v s25
Lecture 02: Second Law and Entropy; Adiabatic Availability; Maximum Entropy Principle	02 ^v s01
Quick Review: Course Objectives: Part I	02 ^v s02
Quick Review: The Loaded Meaning of the Word System	02 ^v s04
Quick Review: The Loaded Meaning of the Word Property	02 ^v s05

Quick Review: What Exactly Do We Mean by the Word State (of a System)	02 ^V _S 06
Quick Review: What Do We Mean by General Laws of Time Evolution	02 ^V _S 07
Quick Review: Time Evolution, Interactions, and the Concept of Process	02 ^V _S 08
Quick Review: Definition of Weight Process	02 ^V _S 09
Quick Review: Main Consequence of the First Law: Definition of Property Energy	02 ^V _S 11
Quick Review: Consequences of the First Law: Energy Balance Equation	02 ^V _S 12
Quick Review: States Can Be Steady/Unsteady or Equilibrium/Nonequilibrium	02 ^V _S 14
Quick Review: Equilibrium States Can Be Unstable/Metastable/Stable	02 ^V _S 15
Quick Review: Hatsopoulos-Keenan Statement of the Second Law of Thermodynamics	02 ^V _S 16
Consequences of First&Second Law:	02 ^V _S 17
First Law and Second Law Together Entail Many Consequences	02 ^V _S 18
Theorem: Kelvin-Planck Statement of the Second Law	02 ^V _S 19
Proof of the Kelvin-Planck Statement of the Second Law	02 ^V _S 20
What Exactly Do We Mean by Reversible Process	02 ^V _S 21
Importance of the Second Part of the Statement of the Second Law of Thermodynamics	02 ^V _S 22
Definition of Property Adiabatic Availability	02 ^V _S 23
Theorem: Criterion for the Reversibility of a Weight Process	02 ^V _S 24
Mutual Equilibrium and Definition of Thermal Reservoir	02 ^V _S 26
Feasibility for Arbitrary States of the Following Reversible Weight Process	02 ^V _S 28
Measurement Procedure Defining the “Constant Temperature of a Thermal Reservoir”	02 ^V _S 29
Definition of Property Entropy	02 ^V _S 32
Definition of Available Energy w.r.to a Thermal Reservoir	02 ^V _S 33
Engineering Meaning of Entropy	02 ^V _S 34
Additivity of Entropy and Impossibility of Entropy Decrease in a Weight Process	02 ^V _S 35
Criteria for the Reversibility of a Weight Process	02 ^V _S 36
Exchangeability of Entropy via Interactions	02 ^V _S 37
Entropy Balance Equation	02 ^V _S 38
Maximum Entropy Principle	02 ^V _S 39
Minimum Energy Principle (Except for Special Systems)	02 ^V _S 40
(Stable Equilibrium) State Principle and Fundamental Relation	02 ^V _S 41
Partial Derivatives of the Fundamental Relation	02 ^V _S 42
Lecture 03: Energy vs Entropy Diagrams to Represent Equilibrium and Nonequilibrium States	03^V_S01
Quick Review: Definition of Property Energy	03 ^V _S 02
Quick Review: Energy Balance Equation	03 ^V _S 03
Quick Review: Second Law of Thermodynamics	03 ^V _S 04
Quick Review: Definition of the “Constant Temperature of a Thermal Reservoir”	03 ^V _S 05
Quick Review: Definition of Property Entropy	03 ^V _S 06
Quick Review: Engineering Meaning of Entropy	03 ^V _S 07
Criteria for the Reversibility of a Weight Process	03 ^V _S 08
Quick Review: Entropy Balance Equation	03 ^V _S 09
Quick Review: Maximum Entropy Principle	03 ^V _S 10
Quick Review: Stable Equilibrium State Principle and Fundamental Relation for the Stable Equilibrium States	03 ^V _S 11
Quick Review: Partial Derivatives of the Fundamental Relation; Gibbs Relation	03 ^V _S 13

Temperature, Pressure, and Chemical Potentials	03 ^V _S 14
Consequences of the Maximum Entropy Principle: Necessary Conditions for Mutual Equilibrium	03 ^V _S 15
Graphical Representation of Basic Concepts on Energy vs Entropy Diagrams	03 ^V _S 16
Projection of the State Space on the Energy–Entropy Plane	03 ^V _S 17
Energy vs Entropy Diagrams: Representation of Non-Stable-Equilibrium States and Stable Equilibrium States	03 ^V _S 18
Energy vs Entropy Diagrams: Special Systems with Upper Bounded Energy	03 ^V _S 19
Quick Review: Definition of Property Adiabatic Availability	03 ^V _S 20
Energy vs Entropy Diagrams: Adiabatic Availability of Non-Stable-Equilibrium States	03 ^V _S 21
Quick Review: Mutual Equilibrium and Definition of Thermal Reservoir	03 ^V _S 22
Energy vs Entropy Diagrams: Non-Stable-Equilibrium and Stable Equilibrium States of a Thermal Reservoir	03 ^V _S 23
Quick Review: Definition of Available Energy w.r.to a Thermal Reservoir	03 ^V _S 24
Energy vs Entropy Diagrams: Available Energy with respect to a Thermal Reservoir	03 ^V _S 25
Energy vs Entropy Diagrams: a System in a Stable Equilibrium State Cannot Release Energy Unless... Nor Receive Entropy Unless...	03 ^V _S 26
Lecture 04: Temperature, Pressure, Chemical Potentials; Clausius Statement of the Second Law	04^V_S01
Quick Review: Energy vs Entropy Diagrams: Representation of Non-Stable-Equilibrium States and Stable Equilibrium States	04 ^V _S 02
Quick Review: Energy vs Entropy Diagrams: Adiabatic Availability of Non-Stable-Equilibrium States	04 ^V _S 03
Quick Review: Energy vs Entropy Diagrams: Non-Stable-Equilibrium and Stable Equilibrium States of a Thermal Reservoir	04 ^V _S 04
Quick Review: Energy vs Entropy Diagrams: Available Energy with respect to a Thermal Reservoir	04 ^V _S 05
Quick Review: Energy vs Entropy Diagrams: a System in a Stable Equilibrium State Cannot Release Energy Unless... Nor Receive Entropy Unless...	04 ^V _S 06
Consequences of the Maximum Entropy Principle	04 ^V _S 07
Necessary Conditions for Mutual Equilibrium	04 ^V _S 08
Proof of Temperature and Pressure Equality at Mutual Equilibrium	04 ^V _S 09
Proof of Temperature and Potential Equality at Mutual Equilibrium	04 ^V _S 12
Concavity of the Fundamental Relation	04 ^V _S 15
Surface Tension and Young-Laplace Equation	04 ^V _S 16
Principal Radii of Curvature	04 ^V _S 20
Principal Radii of Curvature and Area-to-Volume Change upon Surface Displacement	04 ^V _S 21
Nonwork Interactions	04 ^V _S 23
Proof of Clausius Statement of the Second Law	04 ^V _S 24
Graphical Proof of Clausius Inequality (Infinitesimal Transfers)	04 ^V _S 28
Graphical Proof of a More Precise Clausius Inequality Valid for Finite Transfers of Energy and Entropy	04 ^V _S 29
Lecture 05: Definition of Heat Interaction; First and Second Law Efficiencies	05^V_S01
Quick Review: a More Precise Clausius Inequality Valid for Finite Transfers of Energy and Entropy	05 ^V _S 02
Types of Interactions that Exchange Energy Between System	05 ^V _S 03
Definition of Work Interaction	05 ^V _S 04
Definition of Non-Work Interaction	05 ^V _S 05
Definition of Heat Interaction: when the Energy Exchanged Entirely Distinguishable from Work	05 ^V _S 06
Heat Interactions: Is the Definition of Heat Compatible with the Notions We Learn in Heat Transfer	05 ^V _S 07
Heat Interactions: Steady State Heat Transfer Requires Non-Equilibrium	05 ^V _S 08
Energy and Entropy Exchanges Between Two Reservoirs: Clausius Inequalities Impose Irreversibilities in at Least One of	

Them	05 _s 11
Energy and Entropy Exchanges Between Two Reservoirs: Interposing a Third System Makes Reversibility Possible	05 _s 12
Heat Engine Between Two Thermal Reservoirs	05 _s 13
Refrigerator Between Two Thermal Reservoirs	05 _s 14
Heat Pump Between Two Thermal Reservoirs	05 _s 15
Experimental Measurement of Stable-Equilibrium Properties	05 _s 16
Thermometer	05 _s 17
Manometer	05 _s 18
Pressure vs Force per Unit Area	05 _s 19
Heat Capacities	05 _s 20
Enthalpy and Heat Capacity at Constant Pressure	05 _s 21
Heat Capacity at Constant Volume and Equation of State	05 _s 22
Equation of State, Coefficients of Isobaric Expansion and Isothermal Compressibility	05 _s 23
Mayer Relation, Joule-Thomson Coefficient, Sound Speed, Etc	05 _s 24
Gibbs Free Energy and Chemical Potentials as Functions of Temperature and Pressure	05 _s 25
Partial Pressures and Chemical Potentials	05 _s 26
Summary of Properties	05 _s 27
Construction of the Fundamental Relation from Measurements of T , p , α_p , κ_T , C_P , and μ_i 's (Through p_{ii} 's)	05 _s 28
Changing Variables of the Fundamental Relation by Means Legendre Transform	05 _s 30
Lecture 06: Free Energies, Available Energies, and Stability Conditions	06_s01
Quick Review: Definition of Heat Interaction: When the Energy Exchanged Entirely Distinguishable from Work	06 _s 02
Quick Review: Compatibility of Our Definition of Heat with the Notions We Learn in Heat Transfer	06 _s 03
Quick Review: Steady State Heat Transfer Requires Non-Equilibrium	06 _s 04
Principle of Entropy Nondecrease in Weight Processes: Temperature (or $-1/T$) as Escaping Tendency for Energy. Pressure as Capturing Tendency for Volume	06 _s 05
Principle of Entropy Nondecrease in Weight Processes: Temperature (or $-1/T$) as Escaping Tendency for Energy. Chemical Potentials as Escaping Tendencies for Constituents	06 _s 06
Quick Review: Experimental Measurement of Stable-Equilibrium Properties	06 _s 07
Quick Review: Thermometer	06 _s 08
Quick Review: Manometer	06 _s 09
Quick Review: Partial Pressures and Chemical Potentials	06 _s 10
Quick Review: Construction of the Fundamental Relation from Measurements of T , p , α_p , κ_T , C_P , and μ_i 's (Through p_{ii} 's)	06 _s 11
Changing Variables of the Fundamental Relation by Means of Legendre Transform	06 _s 13
Characteristic SES Functions from Legendre Transforms of the Fundamental Relation in Energy Form	06 _s 14
Maxwell Relations from E , F (Helmholtz Free Energy), H (Enthalpy), G (Gibbs Free Energy)	06 _s 15
Other Maxwell Relations from G , Partial Entropy and Partial Volume	06 _s 16
Characteristic SES Functions from Legendre Transforms of the Fundamental Relation in Entropy Form	06 _s 17
Maxwell Relations from S , M (Massieu Free Entropy), J (Hortsmann-Planck Free Entropy), K (Euler Free Entropy) ..	06 _s 18
Availability Functions	06 _s 19
Available Energy with respect to a Thermal Reservoir with Fixed Volume and Amounts	06 _s 20
Stability Conditions Deriving from the Available Energy with respect to a Thermal Reservoir with Fixed Volume and Amounts	06 _s 22
Stability Conditions and LeChatelier-Braun Principle (Part I)	06 _s 25

Lecture 07: Availability Functions and LeChatelier-Braun Principle	07 _s 01
Quick Review: Changing Variables of the Fundamental Relation by Means Legendre Transform	07 _s 02
Quick Review: Characteristic SES Functions from Legendre Transforms of the Fundamental Relation in Energy Form	07 _s 03
Quick Review: Maxwell Relations	07 _s 04
Manipulations of SES Functions	07 _s 05
Jacobian Determinants	07 _s 06
Cyclic Relation	07 _s 09
Mayer Relation	07 _s 10
Back to Availability Functions	07 _s 11
Quick Review: Available Energy with respect to a Thermal Reservoir with Fixed Volume and Amounts	07 _s 12
Quick Review: Stability Conditions Deriving from the Available Energy with respect to a Thermal Reservoir with Fixed Volume and Amounts	07 _s 14
Quick Review: Stability Conditions and LeChatelier-Braun Principle	07 _s 16
Available Energy with respect to a Thermal Reservoir with Variable Volume and Fixed Amounts	07 _s 17
Stability Conditions Deriving from the Available Energy with respect to Changes in Volume at Fixed Amounts	07 _s 18
Available Energy with respect to a Thermal Reservoir with Fixed Volume and Variable Amount of Constituent “i”	07 _s 19
Stability Conditions Deriving from the Available Energy with respect to Changes in Variable Amount of Constituent “i” at Fixed Volume	07 _s 20
Available Energy with respect to a Thermal Reservoir with Variable Volume and All Amounts	07 _s 21
Stability Conditions Deriving from the Available Energy with respect to Changes in Volume and Amounts	07 _s 22
Stability Conditions Deriving from the Available Energy with respect to Changes in the Amounts at Fixed Temperature and Pressure	07 _s 24
Stability Conditions Deriving from the Available Energy with respect to Changes in Volume and Amounts at Fixed Temperature	07 _s 25
Quick Review: Stability Conditions and LeChatelier-Braun Principle (Part I)	07 _s 26
Stability Conditions and LeChatelier-Braun Principle (More General Statement)	07 _s 27
Stability Conditions and LeChatelier-Braun Principle (Example: Air Springs)	07 _s 30
Lecture 08: Few versus Many Particles: Euler Relation; Review of Various Forms of Exergy (Part I)	08 _s 01
Quick Review: Stability Conditions and LeChatelier-Braun Principle (General Statement)	08 _s 02
Large versus Small Systems: Introducing the “Simple-System Model” (Macroscopic Limit) (Many-Particle Limit)	08 _s 07
Microscopic & Mesoscopic vs Macroscopic: Rarefaction Effects Near Walls at Stable Equilibrium	08 _s 08
Simple-System Model Assumes Negligible Effect of Inserting and Removing Partitions	08 _s 13
Simple-System Model: Limiting Assumption about the Fundamental SES Relation	08 _s 14
Simple-System Model: Proof of the Euler Relation	08 _s 15
Simple-System Model: Main Consequence of the Euler Relation	08 _s 16
Bulk Flow States and Bulk Flow Interactions	08 _s 17
Simple-System Model: Bulk-Flow Local-Equilibrium State Model	08 _s 18
Bulk Flow Interactions	08 _s 20
Pulsion Work (and How Enthalpy Gets In)	08 _s 21
Mass, Energy and Entropy Balances for a System Open to Bulk Flow, Heat, and Work Interactions	08 _s 25
Exergies and First and Second-Law Efficiencies in Energy Conversion Technologies	08 _s 27
Exergy Balance for a System Open to Bulk Flow, Heat, and Work Interactions	08 _s 28
Quick Review: First-Law vs Second-Law Efficiencies for Heat Engines, Refrigerators, and Heat Pumps	08 _s 29
First-Law Efficiency or COP (Definition)	08 _s 30

Second-Law Efficiency (Definition)	08 ^V _S 31
Exergy (Generic Definition of the Concept)	08 ^V _S 32
Exergy Associated with Heat Exchange	08 ^V _S 33
Exergy and Second-Law Efficiency in Simple Cogeneration	08 ^V _S 35
Lecture 09: Minimum Work of Partitioning Small Systems; Gibbs' Phase Rule; Van der Waals Model ..	09 ^V _S 01
Notice: All the Results Reviewed So Far Hold for Large as Well as Small Systems	09 ^V _S 02
Quick Review: Microscopic & Mesoscopic vs Macroscopic: Rarefaction Effects Near Walls at Stable Equilibrium	09 ^V _S 03
Quick Review: Rarefaction Effects Near Walls at Stable Equilibrium Become Negligible for Many Particles	09 ^V _S 04
Quick Review: Simple-System Model Assumes Negligible Effect of Inserting and Removing Partitions	09 ^V _S 05
Quick Review: Simple-System Model: Limiting Assumption about the Fundamental SES Relation	09 ^V _S 06
Quick Review: Simple-System Model: Proof of the Euler Relation	09 ^V _S 07
Quick Review: Simple-System Model: Main Consequence of the Euler Relation	09 ^V _S 08
Small Systems: Specific Properties Depend on the Total Amount of Constituents	09 ^V _S 09
Small Systems: Minimum Work of Partitioning	09 ^V _S 10
Basic Simple-System Models of Stable-Equilibrium Properties of (Macroscopic Amounts of) Pure Substances	09 ^V _S 12
Extensive Properties (Definition)	09 ^V _S 13
Specific Properties (Definition)	09 ^V _S 14
Intensive Properties and Intensive State (Definition)	09 ^V _S 15
Homogeneous vs Heterogeneous Stable Equilibrium States, Phases (Definitions)	09 ^V _S 16
Gibbs' Phase Rule (Proof)	09 ^V _S 17
Gibbs' Phase Rule (Possible Cases for a Pure Substance)	09 ^V _S 18
Construction of the Fundamental Relation of a Pure Substance, within the Simple System Model, from $T, p, \alpha_p, \kappa_T, C_P$	09 ^V _S 20
Ideal (Perfect) Incompressible Solid or Fluid Model	09 ^V _S 21
Ideal (Perfect) Gas Model	09 ^V _S 22
Clausius-Clapeyron Relation (Two-Phase States of a Pure Substance)	09 ^V _S 24
Properties of Two-Phase Liquid-Vapor States of a Pure Substance	09 ^V _S 25
Graphical Representation of the SES Fundamental Relation Valid within the Simple System Model	09 ^V _S 26
The U - S - V Fundamental Surface (Water)	09 ^V _S 27
The Mollier H - S Diagram (Water)	09 ^V _S 28
The p - V Diagram (Water)	09 ^V _S 29
The p - V Diagram According to the Van der Waals Model (Water)	09 ^V _S 30
Exergies and First- and Second-Law Efficiencies in Energy Conversion Technologies (Continued)	09 ^V _S 31
Exergy and Second-Law Efficiency in Simple Cogeneration	09 ^V _S 32
Exergy of Bulk Flow Interactions	09 ^V _S 33
Lecture 10: Review of Various Forms of Exergy (Part II); Allocation of Consumptions in Cogeneration ..	10 ^V _S 01
Exergies and First and Second-Law Efficiencies in Energy Conversion Technologies (Continued)	10 ^V _S 02
Quick Review: Exergy of Bulk Flow Interactions	10 ^V _S 03
Exergy in Heating and Cooling Bulk Flows	10 ^V _S 05
Exergy of an Hydraulic Jump	10 ^V _S 07
Exergy in Heating and Cooling Bulk Flows	10 ^V _S 08
Temperature of the Equivalent Heat Interaction in Heating / Cooling for a Liquid Flow	10 ^V _S 10
Temperature of the Equivalent Heat Interaction in Heating / Cooling for an Ideal Gas Flow	10 ^V _S 11
Temperature of the Equivalent Heat Interaction in Heating / Cooling for a Boiling or Condensing Flow	10 ^V _S 12

Minimum Exergy for Low Temperature Heating a Liquid or Ideal-Gas Flow	10 _s 13
Exergy Associated with a Fossil Fuel (Definition)	10 _s 14
Exergy Associated with a Fossil Fuel (in Practice)	10 _s 15
Lower Heating Values of Some Fuels	10 _s 16
The Learning Curve of Fuel-to-Power Conversion Technologies	10 _s 17
Power-Plant Philosophy of Best Available Flame-Based Fuel-to-Power Conversion Technologies	10 _s 20
One Way to Get Around the Inherent Irreversibility of Flames Is by Oxidating the Fuel in Fuel Cells	10 _s 23
Methods for the Allocation of Energy Consumption and CO ₂ Production in Combined Heat and Power (CHP) Production and of Heat and/or Power Production in Hybrid Multi-Resource Facilities	10 _s 24
What Fraction of the Fuel Consumed by a Heat-and-Power Cogeneration Facility Should Be Allocated to the Heat Produced?	10 _s 25
Allocation Problem in Heat&Power Cogeneration: Allocation Fractions, Partial Efficiencies, and Primary Energy Savings (PES)	10 _s 26
Allocation Problem in CHP: Incremental Electricity-Centered Allocation	10 _s 28
Allocation Problem in CHP: Separate Production Reference Allocation	10 _s 29
Allocation Problem in CHP: Choice of Reference Efficiencies	10 _s 30
Allocation Problem in CHP: “Fair” Reference Values in a Given Local Area	10 _s 31
Allocation Example in CHP: a Comparison Between Allocation Methods	10 _s 32
What Fraction of the Electrical Energy Produced in a Hybrid Solar-Fossil Power Plant Should Qualify as ‘Renewable Electricity’?	10 _s 38
Allocation Problem in Hybrid Facilities: Allocation Fractions, Partial Efficiencies, and Primary Energy Savings PES ...	10 _s 39
Allocation Problem in Hybrid Facilities: Incremental Fossil-Centered Allocation	10 _s 41
Allocation Problem in Hybrid Facilities: Separate Production Reference Allocation	10 _s 42
Allocation Problem in Hybrid Facilities: Choice of Reference Efficiencies	10 _s 43
Lecture 11: Allocation in Hybrid Power Production; Chemical Potentials and Partial Pressures	11_s01
Quick Review: Exergy in Heating and Cooling Bulk Flows	11 _s 03
Quick Review: Minimum Exergy for Low Temperature Heating a Liquid or Ideal-Gas Flow	11 _s 04
Quick Review: Power-Plant Philosophy of Best Available Flame-Based Fuel-to-Power Conversion Technology	11 _s 05
Quick Review: One Way to Get Around the Inherent Irreversibility of Flames Is by Oxidating the Fuel in Fuel Cells ...	11 _s 06
Typical (Efficient and Inefficient) Uses of Fossil Fuels	11 _s 07
Quick Review: Methods for the Allocation of Energy Consumption and CO ₂ Production in Combined Heat and Power (CHP) Production and of Heat and/or Power Production in Hybrid Multi-Resource Facilities	11 _s 16
Quick Review: Allocation Problem in Heat&Power Cogeneration: Allocation Fractions, Partial Efficiencies, and Primary Energy Savings (PES)	11 _s 17
Quick Review: Allocation Problem in CHP: Incremental Electricity-Centered Allocation	11 _s 18
Quick Review: Allocation Problem in CHP: Separate Production Reference Allocation	11 _s 19
Quick Review: Allocation Problem in CHP: Choice of Reference Efficiencies	11 _s 20
Quick Review: Allocation Problem in CHP: “Fair” Reference Values in a Given Local Area	11 _s 21
Quick Review: Allocation Example in CHP: a Comparison Between Allocation Methods	11 _s 22
Quick Review: Allocation Problem in Hybrid Facilities: Allocation Fractions, Partial Efficiencies, and Primary Energy Savings PES	11 _s 23
Quick Review: Allocation Problem in Hybrid Facilities: Incremental Fossil-Centered Allocation	11 _s 24
Quick Review: Allocation Problem in Hybrid Facilities: Separate Production Reference Allocation	11 _s 25
Quick Review: Allocation Problem in Hybrid Facilities: Choice of Reference Efficiencies	11 _s 26
Quick Review: Allocation Problem in Hybrid Facilities: “Fair” Reference Values in a Given Local Area	11 _s 27

Quick Review: Allocation Example in Hybrid Facilities: a Comparison Between Allocation Methods	11 ^v _s 28
Introduction to Part II: Chemical Potentials and Multicomponent Equilibria	11 ^v _s 29
Stable-Equilibrium Properties of Mixtures (within the Simple-System Model)	11 ^v _s 30
(Small Systems) (Mixtures) Specific Properties in General Depend on n	11 ^v _s 31
(Large n Limit: Simple-System Approximation) (Mixtures) ... but that Dependence Vanishes for Large n	11 ^v _s 32
(Small Systems) (Pure Substances) Specific Properties in General Depend on n	11 ^v _s 33
(Large n Limit: Simple-System Approximation) (Pure Substances) ... but that Dependence Vanishes for Large n	11 ^v _s 34
Experimental Measurement of SES Properties of Mixtures: Partial Pressures to Measure Chemical Potentials	11 ^v _s 35
Experimental Measurement of SES Properties of Mixtures: Partial Properties from the Chemical Potentials	11 ^v _s 36
Experimental Measurement of SES Properties of Mixtures: Mixture Properties from the Partial Properties	11 ^v _s 37
Lecture 12: Ideal Mixture Behavior; Work from Reversible Mixing; Entropy of Irreversible Mixing	12 ^v _s 01
Quick Review: Stable-Equilibrium Properties of Mixtures (within the Simple-System Model)	12 ^v _s 02
Quick Review: Experimental Measurement of SES Properties of Mixtures: Partial Properties from the Chemical Potentials	12 ^v _s 03
Quick Review: Experimental Measurement of SES Properties of Mixtures: Mixture Properties from the Partial Properties	12 ^v _s 04
Experimental Measurement of SES Properties of Mixtures: Partial Properties from Properties of Isothermobaric Mixing	12 ^v _s 05
Experimental Measurement of SES Properties of Mixtures: Example: Enthalpies of Isothermobaric Mixing of Molten Salts	12 ^v _s 06
Experimental Measurement of SES Properties of Mixtures: Example: Volumes of Isothermobaric Mixing of Molten Salts	12 ^v _s 07
Are Mixture Properties Determined by the Pure-Substance Properties of Its Constituents? Partial Properties in Terms of Partial Pressures and Pure-Substance Properties	12 ^v _s 08
Lennard-Jones Potential (Model of Intermolecular Forces)	12 ^v _s 09
Ideal Gibbs-Dalton Behavior	12 ^v _s 10
Ideal Gibbs-Dalton Mixtures of Ideal Gases	12 ^v _s 12
Isothermobaric Mixing of Ideal Gases. Entropy of Spontaneous Mixing	12 ^v _s 13
Isoentropic Mixing of Ideal Gases. Extracting the Adiabatic Availability of Mixing	12 ^v _s 14
Lecture 13: Gibbs Paradox; Shannon Information Entropy; Single Quantum Particle in a Box	13 ^v _s 01
Quick Review: Stable-Equilibrium Properties of Mixtures (within the Simple-System Model)	13 ^v _s 02
Quick Review: Experimental Measurement of SES Properties of Mixtures: Partial Properties from Properties of Isothermobaric Mixing	13 ^v _s 03
Quick Review: Lennard-Jones Potential (Model of Intermolecular Forces)	13 ^v _s 04
Quick Review: Ideal Gibbs-Dalton Behavior	13 ^v _s 05
Quick Review: Ideal Gibbs-Dalton Mixtures of Ideal Gases	13 ^v _s 06
Quick Review: Isothermobaric Mixing of Ideal Gases. Entropy of Spontaneous Mixing	13 ^v _s 07
Quick Review: Isoentropic Mixing of Ideal Gases. Extracting the Adiabatic Availability of Mixing	13 ^v _s 08
Semipermeable (Passive Transport) vs Selective (Active Transport). Membranes	13 ^v _s 10
Entropy of Spontaneous Mixing (Gibbs Paradox Resolved)	13 ^v _s 11
Information Theory Interpretation: Shannon Information Entropy	13 ^v _s 12
Quantum Model of a Structureless Particle in a Box: Ideal Gas Equation of State for a Single Particle in a Box	13 ^v _s 13
Quantum Models of Particles: Upper Bounded vs Unbounded Energy Spectrum	13 ^v _s 14
Steepest Entropy Ascent Equation of Motion Models the Time Evolution of the State (Probability Distribution) Towards SES	13 ^v _s 15
Ideal Gas Equation of State for a Single Particle in a Box	13 ^v _s 16

Are Mixture Properties Determined by the Pure-Substance Properties of Its Constituents? Ideal Solution Behavior	13 ^V _S 17
Lecture 14: Ideal Solution Model; Osmotic Pressure; Blue Energy; Minimum Work of Separation	14 ^V _S 01
Quick Review: Stable-Equilibrium Properties of Mixtures (within the Simple-System Model)	14 ^V _S 02
Are Mixture Properties Determined by the Pure-Substance Properties of Its Constituents? Ideal Solution Behavior	14 ^V _S 03
Osmotic Pressure of the Solvent of a Dilute Solution: Van't Hoff Relation	14 ^V _S 05
Passive Transport Across Biological Membranes. Osmosis in Biology	14 ^V _S 06
Osmosis in Engineering Applications: Osmotic Pressure of Organic Solvents in Lithium-Ion Batteries	14 ^V _S 07
An Important Example: Osmotic Pressure of Seawater	14 ^V _S 08
A Vital Application in Many Countries: Fresh Water Production from Saline Waters. Pressure-Driven Reverse-Osmosis Desalination of Seawater	14 ^V _S 10
A Potential Renewable Energy Source: Osmotic Power (Blue Energy)	14 ^V _S 11
Isothermobaric Demixing of Ideal Gas Mixtures or Ideal Solutions: Minimum Work of Complete Separation	14 ^V _S 13
Isothermobaric Demixing of Ideal Gas Mixtures or Ideal Solutions: Minimum Work of Partial Separation	14 ^V _S 14
Minimum Works of Complete Separation, Partial Minor Removal, Complete Removal. Isothermobaric Demixing of Atmospheric Air Components	14 ^V _S 15
Minimum Works of Complete Separation, Partial Minor Removal, Complete Removal. Isothermobaric Demixing of a Liquid Solution	14 ^V _S 16
Stratification of Ideal Gas and Liquid Mixtures in Gravitational Field	14 ^V _S 17
Lecture 15: Stratification in Gas and Liquid Mixtures; Liquid-Vapor Spinodal Decomposition	15 ^V _S 01
Mixing and Separation. Stratification	15 ^V _S 02
Quick Review: Isothermobaric Mixing of Ideal Gases. Entropy of Spontaneous Mixing	15 ^V _S 03
Quick Review: Isoentropic Mixing of Ideal Gases. Extracting the Adiabatic Availability of Mixing	15 ^V _S 04
Quick Review: Isothermobaric Demixing of Ideal Gas Mixtures or Ideal Solutions: Minimum Work of Complete Separation	15 ^V _S 05
Minimum Work of Complete Separation Illustrated on an Energy vs Entropy Diagram	15 ^V _S 06
Minimum Work of Complete Separation Achieved by Means of Semipermeable Porous Plugs	15 ^V _S 07
Stratification of Ideal Gas and Liquid Mixtures in a Uniform Gravitational Field	15 ^V _S 08
Example: Stratification in the Atmosphere (if We Neglect Turbulent Mixing)	15 ^V _S 09
Relevance of Mutual Equilibrium Between Ocean and Atmosphere	15 ^V _S 10
Stratification of Ideal Gas and Liquid Mixtures at Rest Inside a Centrifuge	15 ^V _S 11
Gas Centrifuges for Uranium Enrichment	15 ^V _S 12
Stratification of Charge Carriers in a Uniform Electric Field	15 ^V _S 13
Example: Charge Carriers Concentration in a Charged Capacitor	15 ^V _S 14
Liquid-Vapor Equilibria in Pure Substances	15 ^V _S 15
Quick Review: Lennard-Jones Potential (Model of Intermolecular Forces)	15 ^V _S 16
MD and MC Modeling of Non-Ideal SES Behavior: Lennard-Jones Pure Substance ("Lennardjonesium")	15 ^V _S 17
Modeling Non-Ideal SES Behavior: Van der Waals Model of Liquid/Vapor SES of Pure Substances	15 ^V _S 18
Modeling Non-Ideal SES Behavior: Van der Waals Isotherms, Metastable and Unstable States	15 ^V _S 19
Historical Applications of Subcooled Vapor and Superheated Liquid Metastable States: Wilson Cloud Chamber and Glaser Bubble Chamber	15 ^V _S 20
Modeling Non-Ideal SES Behavior (Diffuse Interface Numerical Simulations): Liquid-Vapor Spinodal Decomposition of a Van der Waals Fluid	15 ^V _S 21
Lecture 16: Liquid-Vapor Equilibria in Mixtures; Ideal and Excess Chemical Potentials	16 ^V _S 01
Liquid-Vapor Equilibria in Ideal Mixtures	16 ^V _S 02

Raoult's Law	16 ^v 03
Principle of Distillation	16 ^v 05
Freezing Point Depression and Boiling Point Elevation	16 ^v 06
Non-Ideal Mixtures	16 ^v 07
Quick Review: Experimental Measurement of SES Properties of Mixtures: Mixture Properties from the Partial Properties	16 ^v 08
Modeling Non-Ideal SES Behavior of Mixtures: Duhem-Margules Relation, Excess Mixing Properties	16 ^v 09
Modeling Non-Ideal SES Behavior of Mixtures: Simple and Complex Model Relations for Binary Mixtures	16 ^v 10
Alternative Traditional Ways to Represent Chemical Potentials: Activities and Activity Coefficients	16 ^v 12
Alternative Traditional Ways to Represent Chemical Potentials: Fugacities and Fugacity Coefficients	16 ^v 13
Alternative Traditional Ways to Represent Chemical Potentials: Activities for the Margules and Van Laar Models	16 ^v 14
Simple Model of Non-Ideal Liquid-Vapor Equilibrium: Liquid-Vapor Equilibrium Modeled with the Van Laar Models ..	16 ^v 15
MD and MC Modeling of Non-Ideal SES Mixture Behavior: Lennard-Jones Binary Mixture	16 ^v 17
Liquid-Vapor Equilibria for Non-Ideal Binary Mixtures	16 ^v 18
Lecture 17: Liquid-Liquid Spinodal Decomposition; Introduction to Systems with Chemical Reactions ..	17^v01
Liquid-Vapor Equilibria for Non-Ideal Binary Mixtures	17 ^v 02
Henry's Law for Dilute Non-Ideal Solutions	17 ^v 04
Modeling Non-Ideal SES Behavior of Mixtures: Careful in Taking Derivatives!	17 ^v 06
Non-Ideal SES Behavior of Mixtures: Consequences of the Stability Conditions for a Binary Mixtures	17 ^v 07
Non-Ideal SES Behavior of Mixtures: $A < 2$ (Complete Miscibility)	17 ^v 08
Non-Ideal SES Behavior of Mixtures: $A > 2$ (Partial Miscibility, Miscibility Gap)	17 ^v 09
Solubility Gaps and Limit Curves Arise in Liquid-Liquid (and Solid-Solid) Mixtures that Are Only Partially Miscible Below (or Above) an Upper (Lower) Critical Temperature: Spinodal Decomposition	17 ^v 10
Solubility Gaps and Limit Curves Arise in Liquid-Liquid (and Solid-Solid) Mixtures that Are Only Partially Miscible. They Can Produce Metastable Liquid-Liquid Dispersions: "The Ouzo Effect"	17 ^v 11
Introduction to Systems with Chemical Reactions	17^v12
Energy and Entropy Balances for Closed and Open Systems with Chemical Reactions	17 ^v 13
Notation and Stoichiometry: Proportionality Relations, Reaction Coordinates	17 ^v 14
Properties of Reaction	17 ^v 15
Enthalpy of Formation of H and H-H Bond Energy, Illustrated on an Enthalpy vs Entropy Diagram	17 ^v 16
Van der Waals Forces vs Covalent Bonds	17 ^v 17
Lecture 18: Properties of Reaction; Heating Values and Exergy of Fuels; Adiabatic Flame Temperature	18^v01
Systems with Chemical Reactions	18 ^v 02
Quick Review: Energy and Entropy Balances for Closed and Open Systems with Chemical Reactions	18 ^v 03
Quick Review: Notation and Stoichiometry: Proportionality Relations, Reaction Coordinates	18 ^v 04
Quick Review: Properties of Reaction	18 ^v 05
Quick Review: Enthalpy of Formation of H and H-H Bond Energy, Illustrated on an Enthalpy vs Entropy Diagram	18 ^v 06
Quick Review: Van der Waals Forces vs Covalent Bonds	18 ^v 07
Enthalpy of Formation and Bond Energies	18 ^v 08
Properties of Formation and Hess Relation	18 ^v 09
What Determines the Direction of Spontaneous Reaction and How Temperature Affects It	18 ^v 10
When Is an Isothermobaric Reaction Product- or Reactant-Favored?	18 ^v 11
When Is an Isothermal Reaction Product- or Reactant-Favored?	18 ^v 14

When Is an Adiabatic Reaction Product- or Reactant-Favored?	18 ^v _s 15
Exergy / Maximum Work Obtainable / Minimum Work Required	18 ^v _s 16
Oxidation of Hydrocarbons	18 ^v _s 17
Properties of the Reaction of Oxidation of Hydrocarbons	18 ^v _s 19
Heating Values of Fuels	18 ^v _s 20
Lower and Higher Heating Values of Fuels	18 ^v _s 21
Heating Value and Exergy of a Fuel / Adiabatic Flame Temperature	18 ^v _s 22
Adiabatic Flame Temperature Calculations	18 ^v _s 23
Adiabatic Flame Temperature and Pressure in a Closed Bomb	18 ^v _s 25
Adiabatic Flame Temperature	18 ^v _s 26
Summary on an Energy vs Entropy Diagram	18 ^v _s 27
Is a Reversible Combustion Possible?	18 ^v _s 28
Lecture 19: Affinity and Nonequilibrium Law of Mass Action; Potential Energy Surface	19 ^v _s 01
Second Law and State Principle for Systems with Chemical Reactions	19 ^v _s 02
Quick Review: Notation and Stoichiometry: Proportionality Relations, Reaction Coordinates	19 ^v _s 03
Hatsopoulos-Keenan Statement of the Second Law of Thermodynamics for Systems with Chemical Reactions	19 ^v _s 04
State Principle and Maximum Entropy Principle for Systems with Chemical Reactions	19 ^v _s 05
Quick Review: Enthalpy of Formation and Bond Energies	19 ^v _s 06
Collisions	19 ^v _s 07
Potential Energy Surface and the Role of the Activated Complex	19 ^v _s 08
Forward and Backward Half-Reactions	19 ^v _s 09
Extension of the Simple System Model + Local Equilibrium Assumption: Turning Reactions “On” and “Off” Does Not Affect the Local Properties	19 ^v _s 10
Extension of the Simple System Model: Family of Partial SES’s and Chemical SES	19 ^v _s 11
Fundamental Relation for Chemical Stable Equilibrium States	19 ^v _s 12
Necessary Condition for Chemical Equilibrium (from the Maximum Entropy Principle)	19 ^v _s 13
Non-Equilibrium Law of Mass Action for Ideal Gibbs-Dalton Gas Mixture	19 ^v _s 14
Non-Equilibrium Law of Mass Action for Ideal Solutions	19 ^v _s 15
Equilibrium Law of Mass Action in Terms of Activities	19 ^v _s 16
Temperature Dependence of the Equilibrium Constants	19 ^v _s 17
Equilibrium Constants from Properties of Formation at STP	19 ^v _s 18
Non-Equilibrium Law of Mass Action for Ideal Gibbs-Dalton Gas Mixture	19 ^v _s 19
Dissociation and NO _x Formation in Combustion in Internal Combustion Engines	19 ^v _s 20
Detailed Kinetic Mechanism for the Oxidation of Hydrocarbons	19 ^v _s 21
Alternative Derivation of the Chemical Equilibrium Conditions Using the Method of Lagrange Multipliers	19 ^v _s 22
Complete Chemical Equilibrium	19 ^v _s 23
Lecture 20: Chemical Kinetics; Arrhenius Law; Degree of Disequilibrium; Principle of Detailed Balance	20 ^v _s 01
Activated Complex. Extension of the Simple System Model for Large n	20 ^v _s 02
Quick Review: Extension of the Simple System Model + Local Equilibrium Assumption: Turning Reactions “On” and “Off” Does Not Affect the Local Properties	20 ^v _s 03
Quick Review: Extension of the Simple System Model: Family of Partial SES’s and Chemical SES	20 ^v _s 04
Affinities and the Non-Equilibrium Law of Mass Action (for a Gibbs-Dalton Mixture of Ideal Gases)	20 ^v _s 05
Chemical Equilibrium of Self-Ionization of Pure Liquid Water: pH and pOH	20 ^v _s 06

Introduction to Chemical Kinetics	20 _s 07
Potential Energy Surface and the Activated Complex	20 _s 08
Maxwell-Boltzmann Distribution of Velocities at SES Determines the Probability of Collisions with Sufficiently High Kinetic Energy to Be Chemically Effective, After Which SES Is Rapidly Reestablished by Non-Chemical Collisions	20 _s 09
Arrhenius Activation Barrier	20 _s 10
Forward and Backward Reaction Rates Model Based on Collision Probabilities Considerations	20 _s 11
Detailed Kinetic Mechanism for the Oxidation of Hydrocarbons	20 _s 12
Principle of Detailed Balance and Degree of Disequilibrium	20 _s 13
Sign of the Affinity, Direction of Reaction, and Fluctuation Relation	20 _s 14
Forward and Backward Reaction Rates Model Based on Hypothetical Half-Equilibrium Concentrations of the Activated Complex	20 _s 15
Partial Shifting Chemical Equilibrium Assuming Some Reactions Equilibrate Much Faster than the Others	20 _s 16
Nonequilibrium Build Up in Rapid Supersonic Nozzle Expansion of High-Temperature Products of Hydrogen Oxy-Combustion	20 _s 17
Degree of Disequilibrium Build Up in Rapid Supersonic Nozzle Expansion of High-Temperature Products of Hydrogen Oxy-Combustion	20 _s 18
Nonequilibrium Gasdynamic N ₂ -CO ₂ Infrared Power Laser	20 _s 19
Vibrational Levels of the CO ₂ Molecule	20 _s 20
Lecture 21: Introduction to Nonequilibrium Theory; Onsager Reciprocity and Maximum Entropy Production	21 _s 01
Introduction to Part III: Nonequilibrium States and Irreversible Processes in Continua	21 _s 02
Quick Review: Relation Between Rates and Affinities: Far and Near Equilibrium	21 _s 03
Quick Review: Detailed Kinetic Mechanism for the Oxidation of Hydrocarbons	21 _s 04
Relation Between Rates and Affinities: Far and Near Equilibrium	21 _s 05
Linearization of Rate-Affinity (Flux-Force) Relations	21 _s 07
Explicit Relations for the Case of Two Rates and Two Affinities	21 _s 08
Onsager Relations in the Linear Regime as a Consequence of the Principle of Maximum Entropy Production Rate	21 _s 09
Graphical Illustration of the Ziegler Orthogonality Relation	21 _s 10
Onsager Relations and Symmetry of the Thermal Conductivity Tensor	21 _s 14
Familiar Near-Equilibrium, Nonequilibrium States	21 _s 15
Steady-State Heat Flux	21 _s 16
Fourier Law of Thermal Conduction	21 _s 17
Anisotropic Fourier Conduction in 2D; Special Change of Coordinates	21 _s 19
Cattaneo-Vernotte Heat Conduction Equation	21 _s 20
Lecture 22: Definition of “Heat&Diffusion” Interaction; Diffusive and Convective Fluxes	22 _s 01
Nonequilibrium in Heat, Mass, and Charge Transfer; Logic and Ingredients of the Construction	22 _s 02
Parallel Logic in the Construction of Nonequilibrium Theories: Heat Transfer vs Chemical Kinetics	22 _s 03
Ingredients of the General Balance Equations for the Extensive Properties of a Continuum	22 _s 04
Balance Equations for 1D Heat and Mass Transfer	22 _s 05
Rate of Change of a Generic Extensive Property of a Continuum	22 _s 06
Diffusive and Convective Fluxes in Terms of Transport Velocities	22 _s 07
Local Source/Sink Densities Account for the Effects of Collisions, and Short and Long Range Forces	22 _s 09
General Balance Equations for an Extensive Property of a Continuum	22 _s 10
Interrelations Between Alternative Variables Used to Account for Composition, and on the Definition of Barycentric	

Velocity	22 _s 11
Various Extensive Properties for a Continuum	22 _s 12
Continuum Assumption	22 _s 13
Continuum Approximation vs Knudsen Number	22 _s 14
Gibbs-Duhem and Local-Equilibrium Simple-System Bulk-Flow Relations	22 _s 15
Gibbs-Duhem Relation in Terms of Molar and Mass Specific Properties	22 _s 16
Gibbs and Gibbs-Duhem Relation in Terms of Volume Specific Properties	22 _s 17
Generalization of the Concept of Heat Interaction: “Heat&Diffusion” Interaction	22 _s 18
Recall How We Defined “Heat Interactions”... ..	22 _s 19
... and Proved the Clausius Statement of the Second Law	22 _s 20
Use the Same Logic to Define “Heat&Diffusion Interactions”... ..	22 _s 21
... and Generalize the Clausius Statement of the Second Law	22 _s 22
Only a Fraction of \underline{J}_E Is \underline{q}'' in a “Heat&Diffusion” Interaction	22 _s 23
“Heat&Diffusion” Mode of Interaction Between Adjacent Elements of a Continuum	22 _s 25
Lecture 23: Direct and Cross Effects; General Principles of Entropy Production; the Fourth Law	23_s01
Quick Review: Diffusive and Convective Fluxes in Terms of Transport Velocities	23 _s 02
Quick Review: “Heat&Diffusion” Mode of Interaction Between Adjacent Elements	23 _s 03
General Balance Equations for an Extensive Property of a Continuum	23 _s 04
Nonequilibrium in Heat, Mass, and Charge Transfer: the Extrinsic Relation for the Entropy Production Density in Terms of Fluxes and Forces	23 _s 05
General “Entropic Form” of the Expression for σ	23 _s 06
σ in Terms of the Measurable Heat Flux \underline{q}'' in the Absence of Charge Carriers	23 _s 07
σ in Terms of the Measurable Heat Flux \underline{q}'' and the Current Density \underline{I}''	23 _s 08
σ in Terms of \underline{q}'' , \underline{I}'' and Φ : an “Extrinsic Relation”	23 _s 09
$T_o\sigma$ Is the Rate of Exergy Dissipation per Unit Volume	23 _s 10
Force-Flux Shorthand Notation	23 _s 11
Material Resistance to Flux and Forces: “Intrinsic” Relations for σ	23 _s 12
Direct Laws (Neglecting Cross Effects)	23 _s 14
Onsager Nonequilibrium Cross Effects and the Curie Symmetry Principle	23 _s 15
Sketch of Onsager’s Original Proof	23 _s 16
Orthogonality Relations Yield Onsager Relations in the Linear Regime as a Consequence of the Principle of Maximum Entropy Production Rate	23 _s 17
Orthogonality Relations in the Nonlinear Regime as a Consequence of the Principle of Maximum Entropy Production Rate	23 _s 18
Material Resistance to Flux and Forces: Steepest Entropy Ascent	23 _s 19
We May Call Fourth Law the Statement of Existence of Metric \underline{G}	23 _s 25
“Not Near but Not Too Far” from SES (so that the Assumed Local Equilibrium Gibbs Relation Still Holds): Force-Flux Relations from Sea (Steepest Entropy Ascent)	23 _s 26
The Fourth Law: Existence for Every State of a Local Nonequilibrium Dissipative Metric \underline{G}	23 _s 27
More on Steepest Entropy Ascent	23 _s 28
Bejan’s “Constructal Law” of Design and Evolution in Nature	23 _s 35
While the State Evolves Towards the Steady State with Minimum Global EP (or the SES), Maximal Local EP Selects the Hydrodynamic Pattern	23 _s 36
While the State Evolves Towards the Steady State with Minimum Global EP (or the SES), Maximal Local EP Selects the Most Efficient Flow Pattern	23 _s 37

Maximal Local EP (SEA) Implies Minimum Global EP at Steady State	23 ^v _s 38
Lecture 24: Relative Diffusion Fluxes; Thermoelectric Effects	24 ^v _s 01
Quick Review: Onsager Nonequilibrium Cross Effects and the Curie Symmetry Principle	24 ^v _s 02
Quick Review: Only a Fraction of J_E Is q'' in a “Heat&Diffusion” Interaction	24 ^v _s 03
Relation Between Independent Diffusive Fluxes in Heat&Diffusion Interactions	24 ^v _s 04
Electromagnetic Radiation: a Carrier of Energy and Entropy	24 ^v _s 05
σ in Terms of Relative Diffusive Fluxes and Forces	24 ^v _s 06
Thermoelectric Effects	24 ^v _s 07
Thermoelectric Effects in Solid Conductors	24 ^v _s 08
Seebeck Effect and the Thermocouple	24 ^v _s 12
Seebeck Effect and the Thermoelectric Generator	24 ^v _s 13
Peltier Effect	24 ^v _s 14
Thermocouple, Thermoelectric Generator, and Peltier Cell	24 ^v _s 15
Second-Law Efficiency of the Thermoelectric Generator	24 ^v _s 17
Thomson Heating/Cooling Effect vs Joule Heating	24 ^v _s 18
Cross Effects in Charge and Spin Current Transport	24 ^v _s 19
Spin-Seebeck Effect	24 ^v _s 20
Lecture 25: Thermodiffusive Effects; Multicomponent Transport	25 ^v _s 01
Quick Review: Onsager Nonequilibrium Cross Effects and the Curie Symmetry Principle	25 ^v _s 02
Quick Review: Relation Between Independent Diffusive Fluxes in Heat&Diffusion Interactions	25 ^v _s 03
Quick Review: σ in Terms of Relative Diffusive Fluxes and Forces	25 ^v _s 04
Cross Effects Between Vectorial Fluxes and Forces	25 ^v _s 05
Thermoelectric Effects	25 ^v _s 06
Second-Law Efficiency of the Thermoelectric Generator	25 ^v _s 07
Thermo-Osmosis of Pure Substances in Porous Media	25 ^v _s 08
Thermodiffusion Effects	25 ^v _s 10
Interdiffusion of Two Constituents at Uniform T and p	25 ^v _s 11
Thermophoresis: Interdiffusion of Two Constituents at Uniform p	25 ^v _s 13
Other Mechanisms for Molecular Transport in a Pore/Capillary	25 ^v _s 17
Active Matter Is Particles that Deploy Nonequilibrium to Self-Propel; Self-Propulsion of a Non-Spherical Particle or a Janus Particle Induced by Local Spinodal Decomposition	25 ^v _s 18
Molecular Motors Deploy Nonequilibrium	25 ^v _s 19
Thermophoresis in Solutions of Electrolytes and Charged Particles	25 ^v _s 20
Now You Are (Almost) Ready to Model Electrochemical Systems!	25 ^v _s 21
Modeling Electrochemical Systems	25 ^v _s 22
Nonequilibrium Beyond the Linear Regime	25 ^v _s 23
More on Far-Nonequilibrium Models	25 ^v _s 24
In 2024 Thermodynamics Turned 200 Years Old!	25 ^v _s 26
Ilya Prigogine Prize for Thermodynamics Awarded to PhD Theses	25 ^v _s 27
Thank You for Attending (or Viewing) These Lectures! I Dedicate Them in Memory of My Mentors, with Gratitude for Having Inspired My Journey into This Captivating Field	25 ^v _s 28
